

## Office of the VPR Introduces Software Suite to Support Research Community

A premiere research institution requires high performing services. To this end, Enterprise Research Management System (ERMS) was launched to provide a comprehensive software solution to create an information portal for research administrative support, relieve administrative burden and free up time for mission-focused activities. ERMS is part of our commitment to provide:

- < Exceptional research administration service delivery,
- < Increase transparency, and
- < Automate workflows.

ERMS ensures that Investigators and study teams will always know where the research project is in the project life cycle. Using automated workflows, we reduce the administrative burden of research staff and increase transparency for Investigators. Reviewing, approving, messaging, monitoring, and archiving documents for research projects will occur within one platform with easy-to-use system-to-system functionality.

- ◁ Disclose outside activities, business relationships, and financial interests that have the potential to create a conflict of interest, and
